

NetForecast validates the accuracy for three circuits measured under field laboratory conditions was $\pm 0.7\%$ on a cumulative daily basis.

The CableONE Usage Meter

The Cable ONE Internet data usage meter provides subscribers with information about how much of their monthly data plan they have used. The meter displays all eligible traffic to and from the Internet that counts towards the **subscriber's** data plan. NetForecast independently validates the accuracy of the usage meter's counts.

OBSERVATION

Based on hourly measurements at three locations from September 6th through October 6th 2016, NetForecast validates that the Cable ONE data usage meter had a cumulative daily accuracy of $\pm 0.7\%$.

Assuming the Cable ONE usage meter system operates as it did under field laboratory conditions during the test period, NetForecast's measurement results indicate that subscribers should be able to rely on the meter's accuracy.

Process

NetForecast gathered usage data under field laboratory conditions for three circuits for one month.

With over 20 years experience, **NetForecast** independently audits the accuracy of data usage meters and the quality of user experience for major Internet Service Providers. **Ask if your ISP is accurate.**
